Abstract (en)
[origin: EP1835121A2] A sealing strip (1) for sealing a gap (42) between a first element (2) and a second element (4), which elements are movable relative to each other, comprises a sealing part (10) of elastomeric material, which is adapted to be fastened to the first element (2). The sealing part (10) supports a slide strip (24) of plastic material extending along the sealing strip (1). A fold-back sealing lip (20) projects from the sealing part (10) towards the second element (4). The slide strip (24) is arranged, when folding back the sealing lip (20), to come into engagement with and form a sliding surface for said second element (4).
