Abstract (en)

[origin: EP1835122A2] The revision covering (2) comprises a supplementary profile (3) adapted to its cover layer on the building's inner side and via which the revision covering is connected to a shutter case (1). The supplementary profile is turnably connected to the revision covering. The supplementary profile may be a separate building part from the revision covering. The end of the revision covering may have a rear-cut recess (4), whilst the supplementary profile may have a hinge extension (5, 6) such that a rear cutting (7) on the recess and the hinge extension form a hinge (5, 6, 7). There may be a secure fixture (7, 8, 9) provided for the supplementary profile which may be connected to the revision covering via a film hinge.
