Abstract (en)

[origin: WO2006046208A1] The inventive device comprises a closing system for sealing a first part (4) and a second part (2) which form a cavity, are nestable into each other and form a space being nested into each other. Said system comprises at least one movable seal (7l, 7e) which is placed between the second part (2) and the outside of the first part (4) and/or between the inside of the first part (4) and the second part (2), wherein said movable seal (7l, 7e) is fixed to the first part (4) or to the second part (2) and is ductile in such a way that it makes it possible to produce a tightness by mechanical, hydraulic or pneumatic means and means for distributing an agent in said space.
