Abstract (en)
[origin: WO2006075229A1] The invention relates to a device for the easy opening of a package comprising one or more sheets (2) of plastic. The inventive device comprises an opening tab having a surface area corresponding at least to that of a thumb in order to facilitate the gripping thereof. The invention is characterised in that the opening tab comprises a first layer (5) having a thickness equal to that of the plastic film forming the majority of the package and a second layer (4) which is essentially equal in size to the first layer (5) and which is fixed thereto, whereby the face of the second layer that is positioned closest to the package comprises no coating or glue.
