Abstract (en)

[origin: WO2006066289A1] The aim of the invention is to ensure that the supporting force, which is dependent on the pressure of the supporting fluid, is essentially identical as the supporting force in the central area of the object (9), even in the edge area of an object (9) which is to be maintained and/or transported, in particular, (flat) glass plates. According to the invention, the inventive device (1) comprises, on at least one supporting wall (3 and/or 5), guiding flow openings (21) which are, respectively, directly associated with evacuation flow openings (23).
