Abstract (en)

[origin: WO2006072508A1] The invention relates to a device for producing and/or transforming a web of fibrous material, in particular a paper cardboard web. Said device comprises a heatable and rotatable cylinder, in particular a dry cylinder of a dry part, comprising a cylinder sleeve (1) which can be impinged upon from the inside by a heating fluid. At least one channel (11) is provided in order to guide the heating fluid such that the heating capacity can be improved and the production below the external surface (7) of the cylinder cover can be simplified. The dry cylinder is at least partially modular.
