Abstract (en)
[origin: WO2006073259A2] A recording medium, and a method and apparatus for reproducing data from a recording medium using a local storage is disclosed. The recording medium includes: a first area for storing content data; and a second area for storing first identification (ID) information capable of identifying a content provider (CP) and second identification (ID) information capable of identifying the corresponding recording medium manufactured by the content provider (CP). The method for reproducing data from a recording medium using a local storage includes the steps of: a) reading a directory name for identifying a content provider recorded in the recording medium and a directory name for identifying the recording medium; b) recognizing a binding unit contained in a local storage directory having the same directory name as the read directory name; c) binding the binding unit with files contained in the recording medium, and forming a virtual package; and d) reproducing content data stored in the recording medium and content data stored in the local storage using the virtual package.
