Abstract (en)  
A tissue-adhesive formulation comprises a particulate material having tissue-reactive functional groups, in admixture with a particulate buffer material. The formulation is preferably free or substantially free of materials of human or animal origin, and may consist, or consist essentially of, an anhydrous or partially hydrated blend of particulate material having tissue-reactive functional groups and particulate buffer material. The formulation is preferably buffered to a pH in the range 8-12, and the buffer material may comprise carbonate, phosphate, HEPES or borate buffers. There is also disclosed a sheet comprising a structural support coated on at least one side thereof with such a formulation. The formulation and sheet are useful for joining a tissue surface to another tissue, or for sealing a tissue surface.
