Abstract (en)

[origin: EP1837179A1] The machine has a print work cylinder, a channel, and a funnel assembly (1) with a set of funnels having two folded funnels (A, B) that are arranged adjacent to each other. One of the folded funnels or an additional folded funnel is formed with reference to its width transverse to the accumulating direction of the channel in an asymmetrical manner. The asymmetrical funnel is formed as a half funnel and includes only one funnel flank running diagonal to a channel running direction. An independent claim is also included for a method for producing printed products by a web-fed rotary printing machine.
