Abstract (en)
[origin: EP1837287A1] The present invention relates to a food container (1) comprising a tray (3) suitable to house a food item and which comprises a perimetric edge (7), a lid (2) suitable to cover this tray (3) and means (5) for removably connecting the tray (3) to the lid (2). The connecting means (5) comprise a seat (10) formed in the lid (2), which is suitable to be reversibly engaged by the edge (7), and comprises diametrically opposite deformable engaging portions (27) alternating with deforming portions (28) such that, when a pressure force is applied at the level of said deforming portions (28), that causes the same to approach each other, the engaging portions (27) are consequently deformed by moving away from each other, thereby allowing said edge (7) to be disengaged.
