Abstract (en)

[origin: EP1837470A2] The window or door unit has a wing with a window sash (2), where the wing is movable in particular tiltable or pivotable relative to a window frame (1). An automatic drive (3) opens and closes a window, and has a detachable coupling device for coupling the drive with the sash or the window frame. The coupling device is completely arranged in the movable sash, the fixed window frame or between the sash and the window frame. The coupling device is designed in such a manner that it is decoupled from a position outside of the sash or the window frame.
