Abstract (en)
There is proposed a backup apparatus and a backup method capable of improving the cost performance of a storage apparatus. A backup volume (BVOL) having a capacity corresponding to at least the summation of the capacities of online volumes (VOL) is created. The storage area of the created backup volume is divided into at least the same number of partitions (70A - 70n) as the online volumes. Backup data for each of the online volumes is stored in a corresponding one of the partitions.
