Abstract (en)
[origin: EP1837946A1] The coupler (3) has a via circuit (11) with an input connection and an output connection, and two coupling circuits (13, 15) arranged at a distance from the via circuit. The coupling circuits are provided for determining reflected power and forward power of a plasma process excitation arrangement. The coupling circuits comprise a predetermined and adjusted impedance, and load resistors comprise a resistor value that corresponds to the impedance with a specified tolerance.
