Abstract (en)

[origin: EP1837960A1] The connector has a base (100) with conductive elements (N) connected respectively to input phase and neutral terminals. The elements have reception sockets (124, 125) for a clip contact of a plug at their ends. A cover (200) defines reception wells (210) of the plug. Each well has a bottom (212) with passage holes (212A, 212B). The elements have reception sockets (123, 126) for the contact of the plug positioned on axes forming an acute angle between them. The bottom of one of the wells pivots with respect to a fixed part (201) of the cover for corresponding holes with sockets (123, 126).
