Abstract (en)  
[origin: WO2006066634A1] Disclosed is a cleaning apparatus comprising a reservoir (2) for cleaning liquid, which can be attached to a fixture (1) by means of a screw connection or a bayonet joint so as to be removable by performing a rotational movement about the longitudinal axis of the reservoir. The inventive cleaning apparatus further comprises a liquid conduit that extends from the reservoir (2) to a liquid outlet as well as a conduit coupling (11) which is provided with a coupling piece (12) located on the reservoir (2) and an opposite coupling piece (13) located on the fixture (1). A molded reservoir extension (14) is provided on the side of the reservoir that faces the fixture (1). A receiving device (15) into which the molded reservoir extension (14) can be inserted and which cooperates with the molded reservoir extension (14) as a rotational guide is disposed on the side of the fixture (1) that faces the reservoir (2). The coupling piece (12) is positioned in the area of the molded reservoir extension (14) while the opposite coupling piece (13) is placed in the area of the receiving device (15).
