Abstract (en)
[origin: WO2006029916A1] The invention relates to a switching device comprising a rotatably mounted control element (10) and an eccentric element (12) for translating a rotational displacement (14) of the control element (10) into a translational displacement (16) of a switching element (18), in particular a selector shaft of a hand tool. According to the invention, the shape of the eccentric element (12) differs significantly from that of a rod.
