Abstract (en)

[origin: WO2006062409A2] Identity document consisting of a part with identifying photograph/image. Furthermore, the identity document contains a chip that can be read externally. When reading, information with regard to the fingerprints of the holder of this identity document can be obtained. The identity document is so designed that complete perfect fingerprints cannot remain on the identity document itself. This is achieved by providing the identity document with a ripple structure, wherein the distance between two adjacent raised parts of the ripple structure is 800 - 1400 µm.
