Abstract (en)

[origin: WO2006077031A1] The invention relates to an operating device for a vehicle, which device comprises an arbitrarily actuated actuator for a first function that can be activated during operation of the vehicle and for a second function that can be activated upon and/or after termination of operation of the vehicle instead of the first function. The inventive operating device is characterized in that an information on the second function can be displayed on a display device (2) upon termination of operation even before the function is activated.
