Abstract (en)  
[origin: WO2006075342A1] The process includes a stage of sterilisation of the flagon, the drop-dispenser and the closure cap making up the container, which is preceded by a stage in which the cap and the drop-dispenser are removably anchored together. In a subsequent stage the flagon and the drop-dispenser-cap group are placed in an aseptic environment, and the flagon is filled before the pre-assembled drop-dispenser-cap group is inserted on the flagon. The means for actuating the above process comprise a flagon (1), a drop-dispenser (2) which is pressure-inserted in the flagon (1) and a closure cap (3) which is screwed onto the drop-dispenser before the drop-dispenser (2) is inserted on the flagon (1).
