Abstract (en)
[origin: WO2006059046A2] The invention relates to a fluid product dispensing assembly. The inventive assembly consists of: an external container (1) which is equipped with an opening, said container comprising an internal wall defining an internal space; an internal lining (2) which is disposed in the internal space; and a dispensing member (4), such as a pump, which is used to dispense the fluid product. The invention is characterised in that the assembly also comprises a barrier envelope (3) which is intended to contain the fluid product and which is disposed inside the aforementioned internal lining (2), such that the fluid product does not come into contact with the internal lining (2). The invention is also characterised in that the container (1) is made from a transparent or translucent material, such as glass, such that the internal lining (2) is visible through the container. The invention is further characterised in that the internal lining (2) is substantially opaque so as to mask the above-mentioned barrier envelope (3) at least partially and preferably completely.
