Abstract (en)
[origin: WO2006027782A2] The invention provides a first container for flowable substances. The container has a first opening provided with a plug or seal. The plug or seal is configured to be brought from its closed state to its open state after a fluid tight seal has been formed between the first opening and a second opening of a second container. The plug or seal remains attached to the first container when the plug is brought from its closed state to its open state.
