Abstract (en)

[origin: WO2006069642A1] The invention relates to a method and a device for melt-spinning and texturing a plurality of threads, and to a method for controlling one such device. The plurality of spinning points is divided into a number of spinning stations and the plurality of texturing points is divided into a number of processing groups. According to the invention, a processing group that can be controlled independently of adjacent spinning stations and processing groups is associated with each spinning station.
