Abstract (en)

[origin: WO2006077178A1] The inventive building element co-operates in superimposition with at least one similar building element, wherein each element comprises top (1), bottom (2), front (3) and rear (4) faces and at least two cavities (5, 6) having an elongated section open towards the top (1) and bottom (2) faces and said two cavities (5, 6) are arranged substantially in a parallel position with respect to the rear face (4). Said building element also comprises a projected part (7) which is embodied on the bottom face (2) and in a central area thereof and is insertable with play into one of said cavities (5, 6) of the elongated section, wherein said bottom face (2) of the element comprises a first projected rib (8) which extends in a direction parallel to the rear part (4) of the element along the internal edge (5a) of one of the cavities (5).
