Abstract (en)

[origin: WO2006077098A1] The invention relates to a device (12) which is used to remove solid melt residues from a melting furnace (14) which is used, in particular, for producing metal oxide. Said device (12) comprises a cleaning head (36) which can be driven in a rotating manner and which is used to mechanically remove the melt residues which are adhesive in the melting furnace (14), a rotation drive (58) for the cleaning head (36) in addition to a manipulation device (34) which is used to displace the cleaning head (36) in a spatial manner and in relation to the melting furnace (14). The invention further relates to a system (10) which is fitted with said type of device (12).
