Abstract (en)

[origin: WO2006067262A1] A method provides monitoring access to an information server. The method comprises receiving an attempt to access an information server. The method further comprises determining whether the information server is available. The method further comprises informing that the information server is not available, if the information server is not available. The method further comprises storing information relating to the attempt. Furthermore, a gateway, an information server, a communication system and a computer program are configured to execute the method.
