Abstract (en)
[origin: WO2006074757A1] The invention relates to a workflow management method for managing work routines within jobs that are placed by a management information system and are carried out on at least one executing system, whereby said jobs within the management information system are defined by a calculation module, they are assigned by a workflow management module to the resources of the executing systems in accordance with the quantities and schedules required and transmitted to the executing systems in the job definition format. In order to facilitate handling of a large number of work routines, the work routines are combined in the workflow management module to give groups.
