Abstract (en)
[origin: EP1839524A1] The device has an applicator (1) with a handle (2) extending along a longitudinal axis (X). A rotating application unit (5) is movable relative to the handle around a rotational axis (Y). The unit defines an application surface (6) projecting toward an exterior between free surfaces of the unit, where the surface is loaded with a make-up product to be applied on a region for make-up. The axis (Y) is inclined with respect to the axis (X) and is not perpendicular to the applicator. The unit is laterally separated with respect to the handle, such that a proximal side (4) of the surface is free.
