Abstract (en)

[origin: EP1839980A2] A vehicular brake hydraulic pressure control device has a first operation unit (T1) including a first brake operation element (L1); a first brake system (K1) for braking a first wheel brake (R) corresponding to the first operation unit (T1); and a first control valve unit A and B for controlling brake hydraulic pressure in the first brake system (K1). In the device, the first operation unit (T1) and the first brake system (K1) are separated so as not to flow a brake fluid, and the device further comprises a brake fluid tank (30) having a reservoir function for supplying the brake fluid to the separated first brake system (K1).
