Abstract (en)

[origin: EP1840044A1] The system has a motion unit that is displaced over a section (41`) in a pivoting end in a moveable manner, where the section lies within an outside of a moveable bag (10`) filled with beverage. Movement is transferred within an introduced section (42`) lying in a case of planar moveable parts (40`) on a beverage filling, under pulling movement of an inner case (20`). The inner case provided as a moveable unit is projected in an inside of the beverage filled bag and seals the planar moveable parts. Independent claims are also included for the following: (1) a bag of a beverage dispensing system (2) a method for operating a beverage dispensing system and for preparing cooled beverage for a portion wise dispensing from the dispensing system.
