Abstract (en)
[origin: EP1840063A1] A film roll is provided in which the terminal end of the film can be temporarily held in place and easily peeled off without damaging the film. A film roll (9), which is formed by winding a length of film (F) around a paper tube (9a) and is automatically loaded into a bag packaging machine (3), is provided with an adhesive member (9b) on a portion thereof within 10-20 mm from a terminal end (F1) of the film (F), and between the reverse side of a portion of the terminal end (F1) and the front side of a portion of the film (F) on which the portion of the terminal end (F1) overlaps. The adhesive member (9b) is formed so as to increase in thickness from the inside of the film (F) toward the terminal end (F1).
