Abstract (en)
[origin: EP1840202A1] A fermented alcoholic beverage that is imparted a beer-like, natural color level and flavor and a method for producing the same are provided in a fermented alcoholic beverage that uses brewer's yeast and a method for producing the same. A fermented alcoholic beverage that is imparted a beer-like, natural color level and flavor may be produced without using artificial colorings such as caramel by adjusting the liquid color and flavor of the fermented alcoholic beverage using Maillard reaction products of sugar and proteolytic products or a preparation of the same. The method for producing a fermented alcoholic beverage of the present invention may be used in particular in low-malt beer or other miscellaneous liquors that require enhancement of the color level and flavor of the fermented alcoholic beverage because of restrictions on the use of fermentation ingredients.
