Abstract (en)

The invention is a reinforcing element (1; 20) for concrete structures comprising a filiform body (2) having one shaped section (3; 21) in the vicinity of each end (2a) and part of the external surface (4) made rough by a plurality of ribs (5) delimiting recesses (6) created in the filiform body (2). The filiform body (2) is a flat strap (7) that defines a mainly longitudinal direction (X) and presents external surfaces (4) on which the ribs (5) and the recesses (6) are created. The ribs (5) intersect one another.
