Abstract (en)

[origin: EP1840313A1] The present invention related to a frame or casing for a door and/or window, the width of which being adjustable to the thickness of the wall. This effect is obtained because the frame includes a partial frame the width of which being adjustable. By including breaking areas and a hook connection with complementary lip, the adjustable partial frame can rapidly be broken down to size and the frame can easily be mounted in a very simple manner. The invention further describes also a door and window, the casing of which is composed of these frames with adjustable width.
