Abstract (en)

[origin: EP1840473A2] The device has an elevation (38) arranged at a runner for a support section (40) to take up the elevation in the mounting position of the device between an upper side of the lower guiding roller (16) and a lower side of the upper guiding roller (14). The support section is engaged in the mounting position of the device between both guiding rollers and lies in the space between the guiding rollers pair and the treatment chamber wall. The elevation is formed as an angle profile arranged with an L shaped section along the runner with a shank and the support section is arranged at the other shank.
