Abstract (en)

[origin: EP1840677A1] The device has a manual control element (2) occupying a neutral position and a position for setting the time indicating elements. A mechanism (3) is provided for resetting an indicating element (1) to zero. The mechanism is connected to the manual control element. The mechanism resets the indicating element to zero that comprises the another manual control element. The later manual control element resets the indicating element to zero when the former manual control element is in the position for setting the other time-indicating element.
