Abstract (en)

[origin: EP1840680A1] The module has a rotary dial possessing an opening (2) for displaying a complication of a watch movement/an image. The rotary dial is mounted rotatably on a base dial (3) via an annular low-friction member (4). The rotary dial is pivoted through a certain angle by the action of a pusher (9) to display another complication/image through the opening. Driving pins are arranged at regular/irregular intervals on a circle situated close to the center. The action of the pusher causes a transmission rocker (10) to pivot and communicate a rectilinear movement.
