Abstract (en)

[origin: EP1840800A2] An assumption is made a quantity of labels that make up a set of labels that is set in advance is A (S81). A determination is made as to whether or not a specified label exists between n th and (n+A-1) th labels in a history of printing stored in a history memory area 351 (S85) . If a specified label does not exist between n th and (n+A-1) th labels, an object for processing is moved to a head label n+A of the following set (S87). If, however a specified label is found between n th and (n+A-1)th labels, a determination is made that the found label between n th and (n +A-1) th labels is of a set to which the specified label belongs (S89). Further, a set of labels determined in S89 is selected as an object for printing (S91) . A determination can be made from the history of printing and from the quantity of labels that make up the set as to which set the specified label belongs, and the set of labels can be deemed as objects for printing.
