Abstract (en)

[origin: EP1841285A1] The first hearing device has a first memory for data logging a first adjustment to the hearing device, while the second hearing device has a second memory for data logging second adjustment to the hearing device. The binaural link is a wireless communication link that connects the first and the second memory for data logging to synchronize the first and the second adjustments so that the synchronized adjustment is implemented in the first and the second hearing devices. An independent claim is also included for an adjustment method of hearing device system.
