Abstract (en)

[origin: DE102006014884B3] The device has a housing and a face plate (5), where the housing is locked by a module. An elastic tape (7) provided in the longitudinal direction is fixed within the housing or at the face plate and/or the module. The tape pulls the face plate and/or the module vertically to the corresponding opening (8) in the housing under preloading. Electronic components such as coil, are attached to the elastic tape.
