Abstract (en)
[origin: FR2880001A1] The dispenser has a fluid product reservoir (2) with a projecting neck (23) defining an opening (230) having an upper outer edge (25) and a lower inner edge (26). A fluid product dispensing part (3) is fixed in the opening. An anti-falsification unit (1), e.g. RFID device, has a stop unit (11) to come in stop contact against the lower inner edge in case of attempt of removal of a dispensing unit (30) such as a pump or a valve, from the neck. The unit (1) has a removable bottom part (10) that is separated from the dispensing part, in case of supported contact with the inner edge that exceeds a predetermined threshold.
