Abstract (en)

[origin: FR2881106A1] The device has an evacuation unit (14) comprising an air evacuation duct (16) permitting the evacuation of the air in a container or mold (6) when a powder material penetrates in the container or mold. An air evacuation duct (18) permits the air to exit the container or mold before starting a filling phase. A pneumatic pump (24) extracts the air contained in the container or mold during the filling phase. An independent claim is also included for a method for filling a container or mold with a powder material.
