Abstract (en)

[origin: WO2006079561A1] The invention relates to a conveying element for conveying a multitude of unsorted products to a device located downstream therefrom, particularly a device for separating the products, comprising a rotationally drivable rotary disk (11). The device is characterized in that a guide element (15) arranged eccentric to the rotary disk (11) is situated on the rotary disk (11). This guide element (15) has a preferably circular lateral wall (14).
