Abstract (en)

[origin: WO2006060834A1] The invention relates to a single-handed bottle opener in the form of a device for opening a bottle (2) which is sealed with a crown cork (5) comprising a supporting member (3) for supporting the device (1) and a pressure member (4) for raising the crown cork (5). A powerful opening noise can be ensured by virtue of the fact that the supporting member is embodied in an essentially ring-shaped manner and has an inner diameter enabling the supporting member (3) to be placed on the neck (6) of the bottle, and that the pressure member (4) is embodied in the form of at least one curved spring which is formed on the supporting member (3) or fixed thereto.
