Abstract (en)  
[origin: WO2006079134A1] The invention relates to a support-type component (1) that is composed of individual sections and comprises a flange (2) and two struts (3, 4). Said component is characterised in that the flange (2) is provided with a respective strut (3, 4) on each longitudinal side, each strut being fixed to a longitudinal side wall of the flange (2), preferably by means of adhesive and that the end regions (7) of the struts (3, 4) that face away from the flange (2) are joined together by their adjacent surfaces (8, 9), preferably by means of adhesive. The respective struts (3, 4) have a cross-section in the form of an elongated S.
