Abstract (en)
[origin: DE102005003459B3] The body has two bushings (14) extending across through a loop package (12). A collar (16) is attached on end of the bushings to axially support the loop package on the related bushings. A rubber elastic jacket (18) partly embeds the loop package, and areas of the bushings are smoothed. The collars are rested on the related bushings to rotate the bushing within the collar, when the bushings are firmly connected with the jacket.
