Abstract (en)
[origin: WO2006074808A1] The invention relates to a switchgear cabinet control system and a monitoring system comprising at least one switchgear cabinet (G1 ... Gn), a control and monitoring device (US, US1) and an operating and information system which comprises user components and data processing, data transferring and storage components which can be remote controlled, in addition to a user guiding device and a configuration device. An individually adapted, simple to operate system is obtained in such a manner that the operating and information system also comprises a planning device which is used to selectively combine at least one switchgear cabinet comprising switchgear cabinet components to an individual user system (NA, NA1) in a provider device (RS), wherein offer-related data of various switchgear cabinets (G1 ... Gn) and switchgear cabinet components are contained. A selected arrangement of planning data which is related to at least one switchgear cabinet and switchgear cabinet components can be extracted therefrom.
