Abstract (en)
Carriage system for carrying burdens (B) by a person (1). A torso module (2) and a support module (3) are arranged to found upon the person's hips in the person's upright position, e.g. via a hip module (3a) around the person's hips. The length of the support module is variable, starting from a minimum length, at which, in the person's upright position, the torso module (2), via the support module (3), founds upon the person's hips. The support module comprises a support element (3b-c) and a forked hip element (3d). The fork ends are swivelingly (3g) connected with the hip module. The support module may be enabled to adjust the degree of flexibility/stiffness of the support module.
