Abstract (en)
[origin: EP1842517A2] The aid has a drive wheel, which is driven using a drive motor, and an operating device with a steering head (12). A handlebar (10) is supported in the steering head. An operating device is designed such that the drive motor is controlled by deviation of the handlebar downwards for forward driving of a wheel chair. The handlebar is held in neutral position by spring units e.g. rubber mountings, and is height adjustable.
