Abstract (en)

[origin: EP1842599A2] The method involves shifting glue applying nozzles of coating devices (200) from an operating position into a cleaning position. Glue outlets of the nozzles are supplied with a fluid by immersing the glue outlets in a fluid volume and by washing the glue outlets with a fluid supplied cleaning device. The fluid contains a solvent of a fluid medium. The flow of procedural steps is controlled or regulated by a control device of the applying nozzles. The glue outlets are formed by a discharge nozzle. An independent claim is also included for a device for applying a fluid medium in goods that are movable relative to a fluid outlet.
