Abstract (en)

System for improving the utilization of the capacity of a wood working line, the wood working line comprises a preceding wood working machine (9) through which wood pieces (16) are fed longitudinally into and a subsequent wood working machine (11), through which the wood pieces are fed transverse, wherein the speed of the preceding working station (9) on a regular basis is adapted to the length of the wood pieces (16), so that the number of wood pieces (16) which is delivered from the station per time unit is sought to be adapted to the speed of the subsequent wood working machine (11).
